

Solutions for Lenel Smart Employee ID with Lenel OnGuard

For enterprise and government customers that want to deploy a single security badge for physical and logical security, Lenel and Actividentity solutions streamline processes for issuance and management of Smart Employee ID. With Lenel OnGuard® and ActivID™ CMS, cards are issued and managed from a single console, and they secure both physical access and logical access.

When deployed with ActivClient® on end-users workstations, the Smart Employee ID enables secure Windows and network login, PC 'locking', secure remote access (VPN), and secure email with digital signatures.

Features and benefits

Compelling ROI

With ActivClient, the smart cards can be used for many security applications including strong authentication, data security and digital signature. In addition, Actividentity SecureLogin® SSO enables single sign-on to enterprise and desktop applications while leveraging the security of the smart card.

Ease of deployment

ActivID CMS can be deployed as an add-on to Lenel OnGuard without the need for any software development or customization: only simple configuration.

Streamlined processes

ActivID CMS functionality is accessible directly from the Lenel OnGuard ID CredentialCenter™, there are no new processes for issuance and lifecycle management of the Smart Employee IDs.

Future-proof

ActivID CMS supports a broad range of smart cards, readers, directories, certificate authorities, and will continue to evolve and adapt to your future needs.

Certifications

- ActivClient module received FIPS 201 certification from NIST
- ActivClient and ActivID CMS support FIPS 140 certified smart cards and applets
- ActivClient and ActivID CMS support FIPS 201 certified smart cards and applets
- ActivID CMS supports FIPS 140 certified Hardware Security Modules

Standards compliance

- ISO 7816
- GlobalPlatform
- Java Card™
- HID Prox® and iClass®
- Philips MiFare® and DESFire®
- PC/SC
- PIV / FIPS 201
- GSC-IS 2.1
- Microsoft CAPI / Crypto API
- PKCS# 7, 10, 11
- CRMF / CMMF / CRM
- LDAP 3.0
- SSL 3.0
- Section 508

How it works

Lenel OnGuard® ID CredentialCenter™ consolidates employee physical credentials, biometrics, and demographic information onto a single secure smart card, captures photo ID, prints the card, and is transparently integrated with ActivID CMS for creation and encoding of logical access credentials onto the smart card chip (PKI keys and certificates, passwords, biometrics and one-time-passwords).
