

Solutions for Novell

Strong Authentication for Novell iChain with Smart Cards or USB tokens

For Novell® iChain® customers concerned by rising security threats and the weaknesses of password authentication, Actividentity provides a strong authentication solution fully integrated with Novell iChain to enable secure, easy and cost-effective access of iChain protected resources, applications and services.

With ActivClient®, the market-leading smart card middleware, iChain requires two-factor authentication (insertion of a smart card or USB token and typing of a secret PIN code) before enabling access to applications.

Features and benefits

Comply with security requirements

Address IT security and compliance requirements by preventing unauthorized access to information.

Improved user experience

End-users no longer need to remember complex passwords: instead they simply insert their smart card or USB token and type their PIN code.

Advanced security options

Increase security through two-factor authentication and advanced security options including storage of credentials on the Smart Card or USB token and encryption of user data in the directory with PKI credentials on the device.

Ease of deployment

Designed to integrate seamlessly with Novell iChain and other Novell products such as eDirectory™, NMAS™ and Novell Identity Manager.

Return on investment

With ActivClient, organizations can deploy strong authentication for Windows, Linux, VPN/dial-up, Web Login, as well as data security and digital signature. Additionally, ActivClient can be combined with Novell SecureLogin to enable single sign on with advanced security features that leverage smart cards and USB tokens.

Future-proof

Supports a broad range of smart cards, readers and USB tokens.

Specifications

Actividentity products

- ActivClient
- Optional:
 - ActivID™ Card Management System
 - ActivKey™
 - Actividentity Smart Cards and Applets
 - Actividentity Smart Card Readers

Novell products

- Novell SecureLogin
- Optional:
 - Novell eDirectory
 - Novell NMAS
 - Novell Certificate Login (NCL)

Standards compliance

- ISO 7816
- Sun® Java Card™
- GlobalPlatform/OpenPlatform
- PC/SC
- X509
- PKCS #7, 10, 11 and 12
- Microsoft CAPI
- SSL 3.0
- S/MIME
- GSC-IS 2.1
- U.S. DoD CAC
- FIPS 201/PIV
- Section 508 compliant

Certifications

- FIPS 201 / PIV certified by NIST
- Supports FIPS 140-2 certified cards and applications
