

Solutions for Novell Strong Authentication for SUSE Linux with Smart Cards

For Novell® SUSE® Linux customers concerned with the rising security threats and the weaknesses of password authentication, Actividentity provides a strong authentication solution fully integrated with the SUSE Linux environment to enable secure, easy and cost effective access to terminals and resources.

With ActivClient® for Linux, access to Linux desktops and workstations is protected by a smart card that together with a PIN code provides two factors of authentication.

Features and benefits

Comply with security requirements

Address IT security and compliance requirements by preventing unauthorized access to information.

Improved user experience

End-users no longer need to remember complex passwords: instead they simply insert their smart card and type their PIN code.

Optimized for SUSE Linux

The solution enables strong authentication by securely storing the SUSE Linux password or logon certificate on the smartcard.

Interoperable

ActivClient for Linux supports smartcards issued and used by ActivClient for Windows, thus ensuring support for heterogeneous environments.

Return on investment

Enable strong authentication for Windows, Linux, VPN/dial-up, web login, thin client and remote applications, as well as data security and digital signature.

Future-proof

Supports a broad range of smart cards and smart card readers.

Specifications

Actividentity products

- ActivClient for Linux
- Optional:
 - ActivID™ Card Management System
 - Actividentity Smart Cards and Applets
 - Actividentity Readers

Novell products

- Optional:
 - Novell eDirectory™

Standards compliance

- ISO 7816
- Sun® Java Card™
- GlobalPlatform / OpenPlatform
- PC/SC
- X509
- PKCS #7, 10, 11 and 12
- SSL 3.0
- S/MIME
- GSC-IS 2.1
- U.S. DoD CAC

Certifications

- Supports FIPS 140-2 certified cards and applications
