

Solutions for Sun Enterprise Single Sign-On with Sun Java™ System Identity Manager

For organizations concerned with security risks, high help-desk costs, and employee frustration due to passwords, Actividentity SecureLogin® SSO integrates with Sun Java System Identity Manager to provide easy access to enterprise applications (web and non-web) using a single, secure login. This solution eliminates the users burden of remembering multiple passwords and enables organizations to increase security and achieve regulatory compliance while lowering help desk costs and improving productivity.

Features and benefits

Return on investment

Capture ROI with reduced help desk support costs, increased productivity and increased user efficiency according leading analysts. Empower users who forget their Windows® Domain Password with simple and secure self-service password reset capabilities.

Improve user experience

Improve user experience by no longer requiring them to remember multiple passwords or forcing them to manually reset passwords.

Enhance security

Enhance security by adding leading Actividentity strong authentication solutions such as smart cards to cryptographically secure user credentials while further concealing password complexity and boosting credential mobility. For further security, the solution can be deployed so that users do not have knowledge of their own passwords.

Improve productivity

Speed employee access to applications using out-of-the-box support for a wide range of enterprise applications and environments, including Microsoft®, Novell®, Citrix®, Lotus®, and SAP®, and others.

Ease of deployment

Actividentity SecureLogin SSO leverages existing sources of identity (such as corporate LDAP directories, Active Directory®, or identity management repositories) and integrates with Sun's Java System Identity Manager for automated provisioning and management of user accounts and credentials.

Compliance

Comply with mandates and government regulation for identity, privacy, policy enforcement, audit and authentication services.

Specifications

Actividentity products

- SecureLogin SSO
- Optional:
 - ActivClient®
 - ActivID™ Card Management System
 - Actividentity Smart Cards and Readers
 - ActivKey™

Sun Microsystems products

- Sun Java System Identity Manager
- Optional:
 - Sun Java System Access Manager
 - Sun Solaris™

Standards compliance

- GlobalPlatform / OpenPlatform
- Java Card™
- FIPS 201 / PIV certified cards and applications
- FIPS 140-2 certified cards and applications
- FIPS 140-2 certified Hardware Security Modules
- LDAP 3.0
- SSL
- Section 508
- PKCS# 7, #10
- Microsoft CAPI / Crypto API
- ISO 7816
- PC/SC
- GSC-IS 2.1
- SNMP error and event monitoring supported
- Triple DES encryption protects credentials
- AES cryptographic algorithm encrypts user data store (optional)
